Release Notes

Viedoc 4.94

List of functionalities that have been added and updated in this release.

New and updated functionality

Viedoc Platform

The Viedoc platform has been upgraded from .NET Framework to .NET 10, the latest Long-Term Support (LTS) release from Microsoft, supported through November 2028. This update improves overall performance, security, and reliability across the platform.

- Performance has been improved through faster request processing and reduced memory usage, resulting in improved responsiveness across the platform.
- Security has been strengthened by updating third-party libraries to address known vulnerabilities.
- Reliability has been improved through enhanced error handling and diagnostics.
- The upgrade modernizes the entire platform ecosystem, including Viedoc Clinic, Viedoc Admin, Viedoc Worker, and shared component libraries, to .NET 10. All existing studies, data, and integrations continue to function without modification.

IANA Time Zones

- Time zone handling has been updated in Site Settings, where time zones now use IANA time zone names (for example, Europe/Stockholm) instead of Windows-specific time zone names (for example, W. Europe Standard Time). Existing studies have been automatically migrated to the corresponding IANA time zone based on the configured country and time zone. No action is required.

For new studies and sites, the timezone selector now uses a city-based format with search functionality. Each time zone includes a limited set of representative cities (for example, Asia/Kolkata for India).

There are no breaking changes. All existing studies, configurations, APIs, and browser requirements remain unchanged.

Viedoc Clinic/Admin

To ensure consistent terminology across the Viedoc suite, the term “Phone Number” has been updated to “Mobile Number” in the communication log section in Viedoc Admin, and in the exported communication log.

Bug fixes

List of bug fixes that have been updated in this release.

This section lists the bugs that were solved in this release. For each bug, it describes the following:

- **Affected area(s):** describes briefly which area(s) of Viedoc the bug is related to, so that it is easy to identify if any of your active studies are affected.
- **Bug description:** explains the issue and/or how it was solved. In case there are consequences for existing data, this is clearly mentioned in a "Note!".

The following corrections have been implemented in the Viedoc 4.94 release:

- **Affected area(s):** Viedoc Clinic
Bug description: Previously, in user settings, users could add their primary email address as a secondary email address. This has now been solved. A validation has been added, preventing the user from saving the settings if a secondary email address matches their primary email address or any other secondary email address.
- **Affected area(s):** Viedoc Coder / Viedoc Clinic
Bug description: Data exports that include medical coding will fail if any coding operation or edits of items included in medical coding was performed by a user who has since been deleted.

Known limitations

Constraints that define Viedoc's current capabilities, distinguishing its intended scope from defects or bugs.

Please visit Known Limitations page which describes system-wide and application-wide constraints that may affect your study setup and operations.

You can access the Known Limitations page at the following URL:

<https://help.viedoc.net/c/331b7a/5e2a11/en/>
